Correct fit is an important safety requirement.

### FIT TIPS:

- Place the helmet on the rider's head until the front edge extends down to about an inch from the top of the eyebrows.
- Make sure the helmet fits the head snugly from side to side and front to back.
- In the event the helmet does not fit, use the sizing pads and adjust the straps to ensure a custom-fit feel.
- With the helmet properly adjusted, the strap tension should be firm and evenly distributed among all the straps.
- To tell if the proper pads are in place, put the helmet on and tip it from side to side and front to back.
- When properly placed, the helmet should not easily "roll" forward or backward. It should not be removable without unbuckling the strap.
