Policy
Commercial Members: Managed Care (HMO and POS), PPO, and Indemnity
Medicare HMO BlueSM and Medicare PPO BlueSM Members
Total ankle replacement, using a device which the FDA has approved, may be considered MEDICALLY NECESSARY in skeletally mature patients with moderate to severe ankle (tibiotalar) pain that limits daily activity, who have one of the following conditions:
- Arthritis in adjacent joints (i.e., subtalar or midfoot) OR
- Severe arthritis of the contralateral ankle OR
- Arthrodesis of the contralateral ankle, OR
- Inflammatory (e.g., rheumatoid) arthritis.
Unless absolute contraindication to ankle arthroplasty exist.

Absolute contraindications to ankle arthroplasty include ANY of the following:
- Extensive avascular necrosis of the talar dome OR
- Compromised bone stock or soft tissue (including skin and muscle) OR
- Severe malalignment (e.g., > 15 degrees) not correctable by surgery OR
- Active ankle joint infection OR
- Peripheral vascular disease, OR
- Charcot neuroarthropathy.

Total ankle replacement for all other indications is INVESTIGATIONAL.

Prior Authorization Information
Pre-service approval is required for all inpatient services for all products.
See below for situations where prior authorization may be required or may not be required.
Yes indicates that prior authorization is required.
No indicates that prior authorization is not required.
N/A indicates that this service is primarily performed in an inpatient setting.

**CPT Codes / HCPCS Codes / ICD Codes**

Inclusion or exclusion of a code does not constitute or imply member coverage or provider reimbursement. Please refer to the member’s contract benefits in effect at the time of service to determine coverage or non-coverage as it applies to an individual member.

Providers should report all services using the most up-to-date industry-standard procedure, revenue, and diagnosis codes, including modifiers where applicable.

The following codes are included below for informational purposes only; this is not an all-inclusive list.

The above medical necessity criteria MUST be met for the following codes to be covered for Commercial Members: Managed Care (HMO and POS), PPO, Indemnity, Medicare HMO Blue and Medicare PPO Blue:

**Description**

Total ankle replacement is intended to improve function and reduce stress on adjacent joints. It has been performed in patients with severe rheumatoid arthritis, severe osteoarthritis, or post-traumatic osteoarthrosis. Total ankle replacement models can be broadly subdivided into two design types, fixed bearing and mobile bearing.
Fixed-bearing devices lock the polyethylene component into the baseplate, which provides greater stability, but increases constraint and edge-loading stress at the bone implant interface, potentially increasing risk of early loosening and failure.

Mobile-bearing systems have a polyethylene component that is unattached and articulates independently with both the tibial and talar components. These systems are less stable than fixed-bearing designs and have the potential for dislocation and increased wear of the polyethylene component.

Examples of fixed-bearing devices for total ankle replacement include the Agility Ankle Revision Prosthesis from DuPuy Orthopaedics, the Inbone™ Total Ankle from INBONE Technologies and the Eclipse from Kinetikos Medical. All fixed-bearing devices for total ankle replacement are considered investigational regardless of the commercial name, the manufacturer or FDA approval status except as noted in the policy statement.

Examples of mobile-bearing devices for total ankle replacement include the Scandinavian Total Ankle Replacement from Small Bone Innovations and the TNK ankle from Kyocera Corporation. All mobile-bearing devices for total ankle replacement are considered investigational regardless of the commercial name, the manufacturer or FDA approval status except as noted in the policy statement.

Summary
For specific conditions, including presence of bilateral, subtalar or midfoot arthritis, ankle fusion is not indicated. Although total ankle systems are continuing to evolve, and long-term evidence is limited, short-term results suggest similar improvements in pain and function in comparison with arthrodesis, and midterm results indicate 75-80% survival at 10-15 years. Therefore, in the absence of an established alternative for specific conditions, total ankle replacement may be considered medically necessary when those specified conditions are met.
